IGSHPA Technical Conference
October 3, 2012
Indianapolis, Indiana
Where is this demonstration site?
Daily groundwater pumpage is 16 million gallons per day!
Profitable geothermal borehole drilling:

- Is production drilling
- Uses a drill rig with special features
- Does NOT re-drill the same caving zone many times
- Salvages and re-uses the temporary steel casing
- Controls the water and cuttings
Thank you!
I can feel the heat!
